

ABSTRACT OF THE DISCLOSURE

Perpetual energy (PE) including two 22,000 V batteries, two DC-AC converters, and two DC-AC adaptors for connecting, therewith the converters, and the batteries, each battery is located in a conventional battery charger, such that both of the batteries define fully charged operating current thereby to charge one another until a double-bus, and double circuit breaker system prevent the batteries from overcharging. Two elevators to transmit restorable properties, so as to refill the batteries after one hundred years are provided, beneath, each charger.
